

TWENTY-FOURTH
ANNUAL REPORT OF THE
S H A R O N
SANATORIUM
SHARON · MASSACHUSETTS

DECEMBER 1914

SHARON SANATORIUM FROM THE SOUTHWEST.

Twenty-Fourth
Annual Report
of the
Sharon Sanatorium
For Pulmonary Diseases.
Sharon, Mass.

December
1 9 1 4

Incorporated
March 1891

Boston
Griffith-Stillings Press
1915

OBJECT OF THE SHARON SANATORIUM

TO supply a suitable institution for the treatment of *incipient* pulmonary disease arising in women who are unable, for pecuniary and other reasons, to seek distant health resorts. Only patients who are of limited means are received, and no far advanced cases are admitted. Price of board \$10 per week, exclusive of laundry.

The services of the Medical Director and medicines are given free of charge.

Visiting hours { from April 1 to November 1, 3 to 5 P.M.
 { from November 1 to April 1, 1 to 3 P.M.

Visitors are kindly requested to adhere to these hours.

Applications must be made to the Superintendent, Dr. Walter A. Griffin, Sharon, Mass., or to the Medical Director, Dr. Vincent Y. Bowditch, 506 Beacon Street, Boston.

VIEW SOUTH FROM SHARON SANATORIUM.

DIRECTORS' REPORT

IN presenting the twenty-fourth annual report, the Directors have much that is cheerful and encouraging to lay before our friends and supporters, whose almoners we feel ourselves in large measure to be. The pressure for the help which the Sanatorium provides is still great, and the work is more than ever necessary to the community in which we live.

We have been fortunate in having had a generous response to one important request made in previous reports, viz., the establishment of a proper X-ray apparatus. A donation "in memoriam" for this special purpose was made last spring. The building is nearly completed, and after consultation with those eminent in this special work, we hope before many weeks to have a machine in place, to be used not only for the Sanatorium but for the benefit of the physicians in the surrounding towns. By this we believe we shall enlarge the usefulness of the Sanatorium.

The so-called "Reunion Day" suggested by our former Matron and Superintendent, Miss A. R. Hodges, has proved a pleasing and beneficial custom. On the first Saturday of October a reception is held at the Sanatorium during the day, and many of the former patients assemble there to recall pleasant reminiscences of their stay at Sharon, to compare notes, and to renew former friendships. This acts as an encouragement and stimulus to the patients in the Sanatorium, and it has been gratifying to find how many appear, even without a special invitation from the Superintendent.

The following extracts from former patients' letters are gratifying and instructive as showing what has been accomplished since the Sanatorium opened. The first is from one patient who had serious trouble in the lungs accompanied by marked hemorrhages. Since leaving the Sanatorium, in 1892, — twenty-three years ago, — she has married and has healthy, vigorous grown-up children. She writes: "During the last year and at the present time, I can truthfully say my health is almost perfect. Thank God and thank you."

Another comes from a teacher who was at the Sanatorium for three years, and at one time was thought to be incurable, but who finally, by patience and courage on the part of herself and the devoted Matron, left Sharon with the disease "arrested," which at that time meant that all active symptoms of disease had ceased. By following out faithfully the instructions given her at that time, she is now able to write as follows:

"It hardly seems possible that nearly seventeen years have passed since I became a member of the Sanatorium family. I enjoyed many happy as well as profitable months during my stay, and have every reason to believe that my life has been greatly lengthened because of what was done for me there.

"Not only this, but I know, as I never knew before, how to take care of myself, now that I am no longer under the supervision of doctor or nurse. It has been my privilege to pass on this knowledge to others who were not so fortunate as I. I am very well, better perhaps than at any time since leaving Sharon, and I am still teaching.

"I believe I grow more and more fond of the dear old place every year. With a heart full of gratitude, I am,"

These cases are not exceptional among those who have been in the Sanatorium. They are striking examples of what can be accomplished by such means, and show an encouraging and stimulating contrast to the hopelessness

we were wont to feel in the treatment of such cases a quarter of a century ago, when it was thought necessary for recovery to send them far from home.

Our efficient Auxiliary Committee had planned a large entertainment this year for the benefit of the Sanatorium, but owing to the European war they deemed it best to abandon the scheme for the present. An appeal for funds by letter or otherwise has been substituted, and we hope for a generous response from the public to enable us to carry on our work. We desire to remind those who have so loyally aided the institution in times past of the unusual conditions which confront us at present. The ever-increasing cost of living, and the unusual calls for aid from the other side of the Atlantic will seriously threaten the extent and efficiency of our work at Sharon unless our friends remember that our needs are now even more pressing than in the past.

We have to record with deep regret the resignation of one member of our Board, Mr. Augustus Hemenway, who has faithfully served since the earlier years of the Sanatorium. His ever kindly aid and counsel in the work will be greatly missed.

Again we emphasize the fact that this Sanatorium is intended only for women of refinement and restricted means, and not for the very poor or for well-to-do women, for whom comparatively adequate provision exists elsewhere.

Our pressing needs for the immediate future are chiefly:

1. Donations of money to defray annual expenses.
2. A large list of annual subscribers.
3. Subscriptions to the "Lovering Fund," the income of which is used for the benefit of those who cannot afford to pay our full price.

4. Subscriptions to the Endowment Fund.

In addition to the foregoing items we endorse the appeal of the Superintendent for a suitable piano, which would add greatly to the pleasure of the patients who in their exile from home surroundings greatly need such additions to their entertainment and comfort.

A small automobile for use in going to and from the village for domestic purposes would also be very useful and greatly appreciated.

Our thanks are extended once more to the many friends who have aided the Sanatorium, especially the newspapers of Boston.

SUPERINTENDENT'S REPORT

THE past year has been one of somewhat unusual expense, but happily some of the causes of expenditure of money are now at an end. To be sure, the cost of living steadily increases and there seems to be no prospect of its lessening in the immediate future. There is always the possibility of helping this cost somewhat by lowering the standard. This would be a great pity, however, for in the years past the Sanatorium has always striven to give the best that is obtainable, and a comparison with other institutions has always left an impression that there is obtained here a maximum amount of possible comforts, combined with a maximum amount of the essentials of treatment.

Under the head of repairs for the year comes the item of painting. All the buildings have been gone over once on the outside and much of the inside work has been freshened. As an experiment a painter has been hired for a year to work by the day, and supplies have been bought for his use. In estimating the amount of work done in comparison with what has been done in the past by contract, it is evident that a large saving has been made.

Among other repairs may be mentioned a change made in the water supply. For over twenty years water has been obtained from a neighbor's spring on the adjoining farm. The pipes had become so choked with rust that it became necessary either to replace them or seek a new source of supply. The latter has been done and a well

has been dug at a fraction of what new pipes would cost. This well is so near the water tank that piping is a negligible quantity. Furthermore, the pump works against about half the head of water and this should make for economy of service. The water seems to be adequate in quality and quantity.

During the year a washing machine and a mangle have been installed in the laundry. This not only helps the laundress to do more work in a day, but it also makes the work much easier.

Since early summer work has been in progress on a new building. This was started as a combined garage and workshop. The former was made necessary by the new law for garages and by the danger of fire from the old garage. The workshop was deemed wise, as the old shop is small and is needed for other things. It is also so near the patients' quarters that they are disturbed by work which is accompanied by noise. The original plans of the building were modified by the gift of money to establish an X-ray department, so that as at present nearly completed, the structure is a building thirty-four by twenty-eight feet built of the stones about the place, two and a half stories high and fireproof throughout except for the attic, which is partly fireproof. The accompanying picture will give an idea of the building and show that it will be a worthy addition to the Sanatorium. Its cost when complete will be about forty-five hundred dollars.

The farm continues to be a source of pleasure and some profit. This year produce was brought in worth, if bought in the market, six hundred and forty-two dollars. A beginning in apple culture has been made, and if possible this will be further carried out, as the soil is well adapted to apple trees.

X - RAY BUILDING.

The gift of an X-ray outfit will mean much to the Sanatorium and bring it on par with other institutions that have such apparatus. Each year the importance of the X-ray is more appreciated and with certain forms of treatment of the lungs it is almost necessary as an adjunct.

Meanwhile the need of free bed funds is more and more apparent. Many a patient leaves each year sooner than is desirable because of lack of money.

A further appeal is also made again for a new piano. As has been stated before, there is nothing that has given so much pleasure to the patients in years past. But in the years of service that it has seen, the quality of its tone has become far from pleasing. It is hoped that some one has a piano that would better be worn out than left to rust away in some storage warehouse.

WALTER A. GRIFFIN,
Superintendent.

MEDICAL REPORT

Full capacity of Sanatorium	24
Number of patients admitted since Dec. 1, 1913	45
Number of patients discharged during the year	41

OF those discharged two stayed less than one month. One had tuberculosis of wrist, but no trouble with lungs. This leaves thirty-eight to be considered in detail. A tabular view follows, showing the cases classified according to the conservative suggestion of the National Association for the Study and Prevention of Tuberculosis, and the American Sanatorium Association. It will be noted that the present term "arrested" is the equivalent of the much less conservative term, "apparently cured," used until recently.

SCHEME FOR THE CLASSIFICATION OF SUBSEQUENT OBSERVATIONS ADOPTED BY THE NATIONAL ASSOCIATION FOR THE STUDY AND PREVENTION OF TUBERCULOSIS AND BY THE AMERICAN SANATORIUM ASSOCIATION IN 1913.

Apparently Cured:

All constitutional symptoms and expectoration with bacilli absent for a period of two years under ordinary conditions of life.

Arrested:

All constitutional symptoms and expectoration with bacilli absent for a period of six months; the physical signs to be those of a healed lesion.

Apparently Arrested:

All constitutional symptoms and expectoration with bacilli absent for a period of three months; the physical signs to be those of a healed lesion.

Quiescent:

Absence of all constitutional symptoms; expectoration and bacilli may or may not be present; physical signs stationary or retrogressive; the foregoing conditions to have existed for at least two months.

Improved:

Constitutional symptoms lessened or entirely absent; physical signs improved or unchanged; cough and expectoration with bacilli usually present.

Unimproved:

All essential symptoms and signs unabated or increased.

Died:

Results during the past year:

Arrested	4	= 10.5%
Apparently arrested	9	= 23.7%
Quiescent	12	= 31.6%
Improved	12	= 31.6%
Unimproved	1	= 2.6%

The number of patients who had tubercle bacilli in sputa was . 22

The number of patients who had a positive tuberculin reaction was 12

The number of patients in whom the physical signs were deemed sufficient for diagnosis was (763, 782, 764, — this patient refused tuberculin) 3

Case 780 was known to be tubercular from history of surgical findings 1
38

The number of patients who had hemoptysis before entrance or during stay was 17

Average stay of all cases 4.63 months

Longest stay of any case 18 months

Shortest stay of any case 1 month

Average gain in weight of all cases 12.3 pounds

Number of cases who lost weight 5

Average age of all cases 32.1 years

Number of hospital days 7,953

Number of hospital days that patients were confined to bed 627

Number of meals served in bed 2,826

The methods used in treatment are those now generally recognized as the most essential, viz., the combination of the maximum of fresh air, good food, and judicious exercise.

As adjuncts in selected cases, the continued use of tuberculin subcutaneously is recommended and "artificial pneumothorax" is resorted to, often with markedly beneficial results.

The installation of the new X-ray machine will greatly facilitate our work in this direction. Graduated labor is now recognized also as a very marked factor in the improvement of the patients' condition, mental as well as physical. Gardening in the summer and brush cutting in the winter are the usual forms of procedure.
